

4K HDMI Video capture card

SKU:

EAN:

FEATURES

- Audio and Video Synchronous Transmission
HDMI input + audio input supports sound recording and video capture. Easy to set up, the compact and portable device is ideal for applications such as live broadcast, conference room, video recording, etc., without the need for external power supply.
- This HDMI capture card does not require driver installation and takes full advantage of the built-in functions of existing software to bring a smooth experience. Since the device is compatible with most third-party software, it is plug-and-play in Windows, Mac OS X and Linux systems without any additional configuration.
- To ensure reliable video and streaming transmission, this game capture card supports video up/down conversion up to 1920x1080@60fps (1080p) without CPU intervention, and optional audio capture.
- HD 4K Video Recording
1:1 video recording, no delay and no stuttering. Enjoy the best gaming experience.
