

Guitar Wireless Receiver

SKU:

EAN:

FEATUES

- The wireless transceiver features a powerful yet low 25mW transmit power. The receive sensitivity is -95dB, the system frequency response range is 30Hz to 18KHz, and the minimum latency is less than 3ms, ensuring high-quality audio transmission. With a 48KHz sampling rate, an excellent 90dB signal-to-noise ratio, and minimal distortion, it provides a seamless, pure wireless audio experience.
- Excellent dynamic range, with a dynamic range of over 90dB, it can capture the nuances of audio with excellent clarity and accuracy. Efficient power consumption, low operating current ensures energy saving, with the current of the transmitter less than 90mA and the current of the receiver less than 110mA.
- Extended transmission range: With a straight-line transmission distance of up to 50 meters, you can enjoy freedom of movement and provide flexibility and reliability in various performance environments. Versatile instrument compatibility: Tailored for musicians, it is compatible with a variety of instruments, including electric guitars, electric pianos, electric basses, and electric wind instruments, making it a versatile solution for various musical settings.

SPECIFICATION

Feature	10 tones
Function	Audit input and sustain function
Connect the device	Bluetooth MIDI and Bluetooth audio
Size	About 308*37*29mm
Speaker	With stereo speaker
Material	ABS
Supply	DC5V/1000MA
