## technical parameter

---

Frequency response: 100Hz-20KHz

SNR: > 65dB

Shutdown current: 50 $\mu$ a

Battery Specification: 3.7V 1500mah

Charging input: 5v-1a

Headphone output: 32  $\Omega$  10MW \* 2

Style input:  $\leq$  600mV

MIC input: - 42db 3dB

# common problem

---

1. Power on light is not on
  - 1) Determine whether the power is enough. Try charging for 2 hours and try again
2. There is noise or no sound when using the headset
  - 1) Please try plugging in the headset again or plug in the headset before turning on
  - 2) Please use American standard headset
3. Noise heard during live broadcast
  - 1) Reduce the volume of the mobile phone system appropriately during Apple Mobile live broadcast
  - 2) Check that the headset or microphone is fully plugged in
4. Play music without sound
  - 1) Check whether the device is successfully connected to the mobile phone
  - 2) Check whether the headset or headset is correctly connected to the device interface
  - 3) Check whether the mobile phone has played normally. You can exit and reopen the playback software to see whether it returns to normal
  - 4) Check whether the monitoring volume of the device is adjusted to the minimum. At this time, adjust the monitoring volume of the device to see whether it returns to normal
  - 5) Check whether the volume of the mobile phone is adjusted to the minimum. At this time, adjust the volume of the mobile phone to see whether it returns to normal
5. Unable to listen to the microphone
  - 1) Check whether the microphone or headset is correctly connected to the device interface
  - 2) Check whether the microphone volume or monitoring volume is turned down. At this time, adjust the corresponding volume to see whether it returns to normal
6. The sound input by the microphone has no reverberation effect or the sound recorded by the Karaoke software has no reverberation effect
  - 1) Check whether the device is adjusted to the appropriate scene. Try switching it to "singing" or "studio" mode and try again
